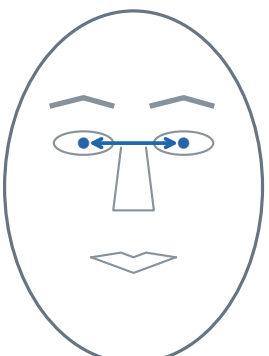
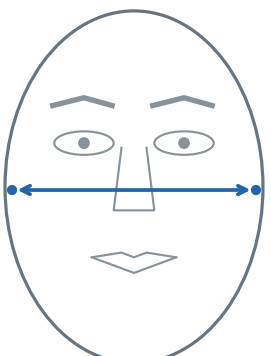
# FaceKit extraction workflow | schematic

## Interpupillary distance



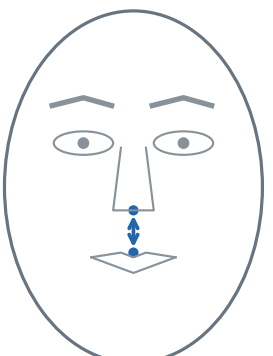
468 ↔ 473; divided by bizygomatic width

## Bizygomatic width



234 ↔ 454; a denominator for many historical features

## Philtrum length



2 ↔ 0; divided by midface height = $|y_{168} - y_2|$

Alignment centers on inner canthi 133/362 and makes their connecting line horizontal (in-plane roll).
All drawn coordinates are schematic, not measured faces.
